Mode Group 2020-2021

Full-Stack Web Developer

Mode Group is a software company that focuses on designing web applications and websites for businesses. I was responsible for developing a website for the company as a full stack web developer. I used NodeJS for the backend API's and ReactJS for the front-end design. This project was done under tight deadlines, so I had to use my software development skills to craft the website quickly and efficiently. I was able to complete the project on time and with great results. Mode Group had a very unique projects website when I was finished with it. It had a modern look and was very user-friendly, with the functionalities needing to be added to suit the needs of the customer. I am very proud of this project and it shows the proficiency and skill that I possess as a full stack web developer.

Botolon 2021-2023

Full-Stack Web Developer

Botolon is a project that I worked on as a full stack web developer, where I used Node.js for the backend API and React.js and Next.js for the front end. Botolon is a chatbot platform for Facebook and Instagram, similar to Chatfuel and ManyChat. This project required me to develop both the technical aspects of the product—such as interacting with the API and creating custom web pages—as well as the visual design, including converting prototypes into functional applications. I was able to gain valuable experience with modern development tools and techniques to help make the project a success.

Drug Interaction 2022-2023

Full-Stack Web Developer

I developed and managed a specialized website designed exclusively for healthcare professionals, specifically doctors, to assist them in identifying potential drug interactions. This innovative system served as a reliable resource to help doctors make informed decisions when prescribing medications to their patients.

KHI Website 2023-2024

Front-End Developer

KHI is a dynamic and modern web application developed using cutting-edge technologies such as React.js, Next.js, and Tailwind CSS. The platform is designed to provide a seamless and user-friendly experience, catering to diverse user needs.
